

Bootstrap is an open-source, mobile first, html library.

It has many practical uses, but I believe that it should be left to the student to explore its uses in later OCPs or when they feel like they have a stronger grasp of HTML as a coding language.

Bootstrap makes building websites easy, but the ease in which it does it makes learning HTML that much more difficult for beginners.

It's not a very hardware intensive software application, and I'll be exploring it more in the future. For now, I'd rather continue to challenge myself with manual HTML and JavaScript coding.
